

BE A PART OF OUR TEAM

INTEGRATION & DEPLOYMENT ENGINEER

 Liège, Belgium | Full-Time Job

About Indao

Indao develops advanced software solutions that help industrial companies connect, structure, monitor and leverage their operational data.

Our technology is deployed in real industrial environments, where reliability, integration quality, infrastructure understanding and pragmatic problem-solving are essential.

To support our growth, we are looking for an **Integration & Deployment Engineer** to strengthen our technical team and play a key role in the deployment and operational follow-up of our solutions.

Your Role

As Integration & Deployment Engineer, you will be responsible for deploying, integrating and maintaining Indao's solutions in customer environments.

You will analyse the customer's technical infrastructure, define the right deployment approach, connect our application to different data sources, set up monitoring and alerting, and ensure proper follow-up after deployment.

This role combines infrastructure, software deployment, data integration, industrial IT and customer-facing technical ownership. You will work closely with the CTO, the engineering team, project teams and customers.

We are looking for a **medior or senior profile** with several years of relevant experience and a strong ability to work autonomously.

BE A PART OF OUR TEAM

INTEGRATION & DEPLOYMENT ENGINEER

 Liège, Belgium | Full-Time Job

Key responsibilities

- Deploy and configure Indao's application in customer environments, whether cloud, hybrid or on-premise.
- Analyse customer infrastructure and define how the solution should be installed, connected, secured and maintained.
- Connect the application to various data sources, such as relational databases, time-series databases, industrial systems, APIs, PLC-related environments or other customer systems.
- Manage Linux-based environments, servers, customer instances and internal technical environments.
- Use tools such as Ansible, Bash, Git and Docker to deploy, maintain, troubleshoot and improve our technical setup.
- Set up and maintain monitoring and alerting to ensure stability, availability and operational continuity.
- Investigate incidents, troubleshoot technical issues and contribute to continuous improvement of our deployment practices.
- Manage access rights to customer instances, internal tools, cloud environments and technical platforms.
- Act as a technical point of contact for customers on deployment, infrastructure, connectivity and integration topics.
- Contribute occasionally to internal IT support when infrastructure-related questions arise.

Must-have skills

- Strong knowledge of Linux environments and system administration.
- Good understanding of networking fundamentals: TCP/IP, VPN, firewall principles and connectivity troubleshooting.
- Ability to script and automate tasks, ideally with Python, batch scripting and/or JavaScript.
- Practical experience with Docker and Git.
- Knowledge of databases, especially relational databases.
- Ability to deploy, configure and troubleshoot software environments.
- Professional communication skills in French and English.

BE A PART OF OUR TEAM

INTEGRATION & DEPLOYMENT ENGINEER

 Liège, Belgium | Full-Time Job

Nice-to-have skills

- Windows Server administration.
- Gitlab, Nexus, Ansible or other automation/configuration management tools.
- Azure, AWS, Hetzner or similar cloud/hosting environments.
- Time-series databases such as InfluxDB.
- NoSQL databases such as MongoDB.
- Industrial IT, automation, OT environments, PLCs or production systems.
- Monitoring, alerting or observability tools.
- IT security, access management, SSH, certificates, backups or disaster recovery.
- Experience in a SaaS, industrial software, data or scale-up environment.

You profile

You are autonomous, resourceful and able to take responsibility for technical topics from analysis to implementation and follow-up.

You enjoy solving concrete problems in real-world environments and are comfortable working in situations where not everything is fully standardised yet.

You are proactive, pragmatic and flexible. When you identify a risk, a missing procedure, a recurring issue or an opportunity to improve the way we work, you raise it and help solve it.

You have an interest in the industrial sector and in the way technology can help companies improve their operations.

You communicate clearly with both technical and non-technical stakeholders. You are professional with customers, reliable with colleagues and comfortable working in an international context.

BE A PART OF OUR TEAM

INTEGRATION & DEPLOYMENT ENGINEER

 Liège, Belgium | Full-Time Job

Why join Indao?

At Indao, you will not be limited to a narrow support or administration role.

You will work on concrete technical challenges, close to customers, infrastructure and industrial data. You will play an important role in how our solution is deployed, monitored, maintained and scaled.

You will join a growing company where ownership, pragmatism, technical curiosity and initiative are valued.

Practical information

- Role: Integration & Deployment Engineer
- Level: Medior or Senior
- Location: Belgium, with hybrid work depending on company and customer needs
- Languages: French and English
- Environment: scale-up, industrial software, data and customer deployment
